

- Update from APR- Alice Gustafson - Informational only
  - The new Email List Library – will be ready for rollout in May. This library provides a set of email lists which leadership can use to send an official email communications at no cost. The lists will be refreshed on a daily basis.
  - PeopleSoft Asset Management Module (AMM)
    - A reminder that UW-Madison is now using this module to manage capital assets.
    - A new scanner system with new scanners should be feeding into AMM this summer. This eliminates a security risk associated with the server supporting the current scanning software. (Bobby should be able to confirm this.)
    - An interface and workflow recommendation will be made in June (implementation to follow) to assist Departmental Property Administrators (DPAs) in accessing/feeding and pulling reports from AMM.
